### Tropical Diseases

Tropical diseases are diseases that are prevalent in or unique to tropical and subtropical regions. The diseases are less prevalent in temperate climates, due in part to the occurrence of a cold season, which controls the insect population by forcing hibernation. However, many were present in northern Europe and northern America in the 17th and 18th centuries before modern understanding of disease causation. The initial impetus for tropical medicine was to protect the health of colonial settlers

### Tropical disease - Wikipedia

A tropical disease is any illness that is most common or only occurs (endemic) in tropical or subtropical areas. Beyond location, many have little in common with each other. They are caused by a variety of factors, including viruses, bacteria, protozoa and parasitic worms (nematodes and trematodes ).
